

06/08/12 - Pest Control

TALPARID MOLE BAIT

Talparid is effective at controlling most common mole species. Talparid kills by mimicking the size, shape and feel of earthworms, the mole's natural food source, causing the mole to consume the bait. Comes ready to use in a ten worm tray. Each worm contains a lethal dose of bromethalin, an active ingredient that capitalizes on the mole's high energy demands. Talparid works quickly and can kill in as little as 24 hours.
