

01/31/10 - Pro Lawn - sun & shade

[Click Here to Download Tech Sheet](#)

Pro Lawn is a mixture of 70% Turf-type Perennial Ryegrasses and 30% Fine Fescues, chosen for their superior turf quality over a broad range of environmental conditions.

Pro Lawn is designed specifically for the customer who requires a superior combination of grasses for intensely maintained landscape areas. Pro Lawn provides a deep green, fine textured turf that is an excellent choice for any quality turf application where only the very best will do.

FEATURES

RAPID ESTABLISHMENT

EXCEPTIONAL DEEP GREEN COLOR

FINE TEXTURED, DENSE TURF

SUPERIOR WEAR TOLERANCE

INSECT AND DISEASE RESISTANCE

SUGGESTED USES

Turf professionals find Pro Lawn ideal for use on home lawns, ornamental commercial turf, golf course fairways & tees, or anywhere a combination of rapid establishment, elite quality, disease resistance and traffic tolerance are primary concerns.

Pro Lawn matches well with commercially raised sod and is useful where a combination of seed and sod is used to complete the landscape. Not suited for use in dense shade or in low maintenance areas.

ESTABLISHMENT

& MANAGEMENT

Planting Rates:

New Lawns 6-8 lbs./1000 sq. ft.

Overseeding 3-5 lbs./1000 sq. ft.

Pro Lawn will germinate in 7-14 days depending on soil temperature and moisture. A first mowing can be expected in about 25-35 days. For best results, Pro Lawn should be planted 1/8" to 1/4" deep. Frequent, light irrigation is required for best germination. Adjust soil pH and apply starter fertilizer prior to seeding.

Recommended mowing height is 1"-2". Pro Lawn has medium fertility requirements. Apply fertilizer

as needed to maintain healthy turf.
