

# Pacific Northwest

## Wildflower Seed Mix

### INGREDIENTS \*

Common Name	Genus & Species	Color	Growth
Baby Blue Eyes	Nemophila menziesii	Blue	A
Baby's Breath	Gypsophila paniculata	White	P
Black-eyed Susan	Rudbeckia hirta	Yellow/Orange	P
Blanket Flower	Gaillardia aristata	Red/Yellow	P
Blue Flax	Linum perenne lewisii	Blue	P
Catchfly	Silene armeria Tall	Pink	A
Corn Poppy	Papaver rhoeas	White/Pink/Red	A
Dame's Rocket	Hesperis matronalis	Lavender	P
Godetia	Clarkia amoena	Pink/Red	A
Lance-leaved Coreopsis	Coreopsis lanceolata	Yellow	P
Mexican Hat	Ratibida columnifera	Red/Yellow	B
Perennial Lupine	Lupinus perennis	Blue	P
Plains Coreopsis	Coreopsis tinctoria	Yellow/Red	A
Prairie Coneflower	Ratibida pinnata	Yellow/Black	P
Purple Coneflower	Echinacea purpurea	Purple	P
Scarlet Flax	Linum grandiflorum rubrum	Red	A
Wallflower	Erysimum capitatum	Orange	P

\* Species subject to change depending on availability

### DESCRIPTION

**PNW Wildflower** is a mixture of 17 annual, perennial and biennial wildflower species that are native and naturalized to the Pacific Northwest, selected to provide seasonal color and beauty to any landscape. Grows to three feet high. Requires full sun.

Once established, the **PNW** requires no fertilizer, minimal watering, and only one trimming at the end of every season. These characteristics make it ideal for use in low maintenance, naturally landscaped areas that require a combination of full color and ease of care. A meadow effect can be achieved by mixing a bunch type grass such as Idaho fescue or Blue fescue to the seed mix at a ratio of 2 1/2 parts grass to 1 part **PNW Wildflower**.

### ESTABLISHMENT & MANAGEMENT

Seeding rate: 1 lbs. per 4000 sq. ft.  
10 lbs. per acre

Remove all unwanted vegetation with the use of an herbicide such as Round-Up, following label directions. Prepare the site by plowing, disking, harrowing or hand raking to create a fine seed bed. Sow the seed and roll in or lightly rake to a depth of 1/8" to 1/4". Care must be taken not to plant the seeds too deeply, as this is a primary cause of seeding failure.

**PNW** does best in soils of low fertility. Keep the planting area moist for 4-6 weeks to help ensure full germination. You should begin to see seedlings in about 2-3 weeks and the first flowers in about 6-10 weeks. To prolong blooming, water occasionally during very dry periods. Hand pull or spray aggressive weeds to reduce competition and aid in establishment.

Mow **PNW** in the Fall to a height of 4"-6" after flowers have finished blooming, set seed, and turned brown (usually mid-October). Leave clippings in place as they contain seeds for next year's growth. Consider supplementing the site next Spring with some new seed to more firmly establish the planting and to suppress weed growth. To preserve the original balance of the seed mixture, **PNW Wildflower** should be re-seeded every 3-5 years.
